

CEN 4010-001 Principles of Software Engineering 2020

- Team name: COVID 10
- Project name: Connections during Social Distancing
- Team number: 10
- Names of students:
Thomas Buzaki; tbuzaki@gmail.com
Bobby Revelo; Bobby.Revelo@gmail.com
Shelly Penichet; spenichet2019@fau.com
Steffi Philip; sphilip2019@fau.edu
- Documentation date: June 30, 2020
- Github link: <https://github.com/cen4010-s2020-g10/Covid10.git>
- Peer evaluation grading rubric:

Group members	Grade
Shelly Penichet	24%
Thomas Buzaki	24%
Bobby Revelo	28%
Steffi Philip	24%

- Additional information:

The following mockup provides features and designs that will be used to create the website [Connections during Social Distancing]. Visual detailed information about each category along with examples will help the customer understand each process of the design. The mockup specifies the language used and the devices compatible with testing.

Spoonacular API

The spoonacular Nutrition, Recipe, and Food API allows you to access over 365,000 recipes and 86,000 food products. Our food ontology and semantic recipe search engine makes it possible to search for recipes using natural language queries, such as "gluten free brownies without sugar" or "low fat vegan cupcakes." You can automatically calculate the nutritional information for any recipe, analyze recipe costs, visualize ingredient lists, find recipes for what's in your fridge, find recipes based on special diets, nutritional requirements, or favorite ingredients, classify recipes into types and cuisines, convert ingredient amounts, or even compute an entire meal plan.

The Dog API

The Dog API

Using the Dog API, the app allows a user to browse images of dogs by breed. Once a breed is selected, the image results are displayed in a responsive grid for the user to scroll through. If the breed has any sub-breeds, there is a filtered sub-breed menu to let a user choose from to display the image results. The user is also able to change breeds and get a new set of results.
